

VRise Brand Alignment Brief

The live website is the **master brand identity** for VRise. All product surfaces, including **VRise Revenue Scanner** and **VRise Collect**, must be updated to match the website's tone, colors, typography, logo system, spacing, and UI feel.[cite:459][cite:1]

This brief is intended to be handed directly to Codex or Claude Code so implementation is consistent and does not drift across products.

Source of truth

Use the live VRise website as the design authority for:

- logo style and lockup,
- brand colors,
- font hierarchy,
- border radius,
- shadows,
- CTA styling,
- navigation treatment,
- card and panel styling.[cite:1]

Do not use the current PDF/report styling of Scanner or Collect as the source of truth. Those screens should be brought in line with the website, not the other way around.[cite:318]

Master brand identity

Brand name

Use VRise consistently. Keep product naming as:

- VRise Revenue Scanner
- VRise Collect

Logo system

Use the website logo system everywhere:

- rising-line brand mark in rounded square container,
- wordmark with the V accented in brand blue,
- same proportions and spacing as supplied in the asset pack.[cite:1]

Rules:

- Do not create separate logos for Scanner and Collect.
- Do not use the square “V” badge from the current PDF/report UI as the primary logo.
- The product UIs may show the mark-only icon in tight spaces, but the overall system must match the website logo family.[cite:1][cite:318]

Color palette

Use these website-derived colors as the standard token set:[cite:1]

```
:root {
  --vrise-bg: #EEF2F8;
  --vrise-bg-deep: #07111F;
  --vrise-panel: hsla(0, 0%, 100%, 0.72);
  --vrise-panel-strong: hsla(0, 0%, 100%, 0.90);
  --vrise-surface: hsla(0, 0%, 100%, 0.70);
  --vrise-text-1: #0D1726;
  --vrise-text-2: #3B4960;
  --vrise-text-3: #748094;
  --vrise-primary: #4F68FF;
  --vrise-primary-hover: #3D55DF;
  --vrise-primary-soft: rgba(79,104,255,0.12);
  --vrise-primary-light: rgba(79,104,255,0.09);
  --vrise-success: #10A879;
  --vrise-warning: #D97706;
  --vrise-border: rgba(20,35,55,.10);
  --vrise-border-strong: rgba(20,35,55,.16);
  --vrise-ring: rgba(79,104,255,.28);
  --vrise-gradient-brand: linear-gradient(135deg, #4F68FF, #5F8DFF 48%, #10A879);
}
```

Application rules:

- Blue is the primary brand color.
- Green is a secondary/semantic color for success and positive status.
- Warm green PDF tones should be removed from primary branding.
- Scanner and Collect should visually look like the website belongs to them.[cite:1][cite:318]

Typography

Use the website font system:[cite:1]

- Heading font: **Plus Jakarta Sans**
- Body/UI font: **Inter** or the same system sans fallback stack used by the site

Rules:

- Product titles, page headers, section headers, and card titles use Plus Jakarta Sans.
- Body text, metadata, form text, table text, and buttons use Inter/system sans.

- Remove serif report-style headings from Scanner PDF/report surfaces unless they are intentionally reintroduced later by brand decision.

Shape and feel

Use the website's premium SaaS surface language:[cite:1]

- frosted or elevated white panels,
- soft cool shadows,
- rounded cards,
- rounded pill buttons,
- crisp modern spacing,
- blue-led visual hierarchy with restrained green accents.

Use these radius tokens:[cite:1]

- 12px
- 18px
- 24px
- 32px

Required product changes

VRise Revenue Scanner

Update Scanner so it feels like a product inside the VRise website brand family.

Required changes:

- Replace current report badge/logo with website logo system.
- Replace muted green/stone-heavy styling with website background, surface, and blue-primary token system.
- Update headings and section titles to website typography.
- Update buttons, pills, score cards, charts, and tables to shared tokens.
- Keep the information structure, but restyle the entire experience to match VRise web brand.
- If PDF export exists, exported PDF should also use website-aligned tokens and logo assets.

VRise Collect

Update Collect to the same brand system.

Required changes:

- Use shared top nav and logo treatment.

- Use same CTA/button design as website.
- Use same typography hierarchy.
- Use same card, table, badge, empty-state, and panel styling.
- Keep green only for success states and healthy payment/workflow signals.
- Keep warning/aged debt/risk states in amber or other semantic colors, not as a second brand palette.

Shared component rules

Across website, Scanner, and Collect, standardize:

- top-left logo usage,
- top navigation shell,
- primary/secondary button styles,
- card padding and radius,
- border color,
- shadow levels,
- section headings,
- pills/badges,
- empty states,
- form inputs and focus states.[cite:1]

Non-negotiables for implementation

- Use the provided brand asset pack directly; do not redraw or reinterpret the logo.[cite:475]
[cite:477]
- Create one shared design-tokens file and import it into website, Scanner, and Collect.
- Create one shared logo component so all three surfaces stay aligned.
- Do not allow Scanner or Collect to keep their own palette, heading style, or alternate iconography.
- The live website remains the ongoing source of truth unless explicitly changed.

Implementation sequence

1. Install shared tokens and logo assets.
2. Update website Scanner and Collect sections to reflect the shared brand language.
3. Restyle VRise Revenue Scanner to match the website.
4. Restyle VRise Collect to match the website.
5. Verify screenshots side by side for consistency.

Definition of done

The work is done when:

- a user can move from website to Scanner to Collect and feel they are inside one product family,
- logos are identical across all surfaces,
- fonts and color usage are consistent,
- the PDF/report styling no longer feels like a separate brand,
- and Scanner plus Collect look ready for sales demos under one VRise identity.[cite:459]
